

EX NO: 3B

DATE:

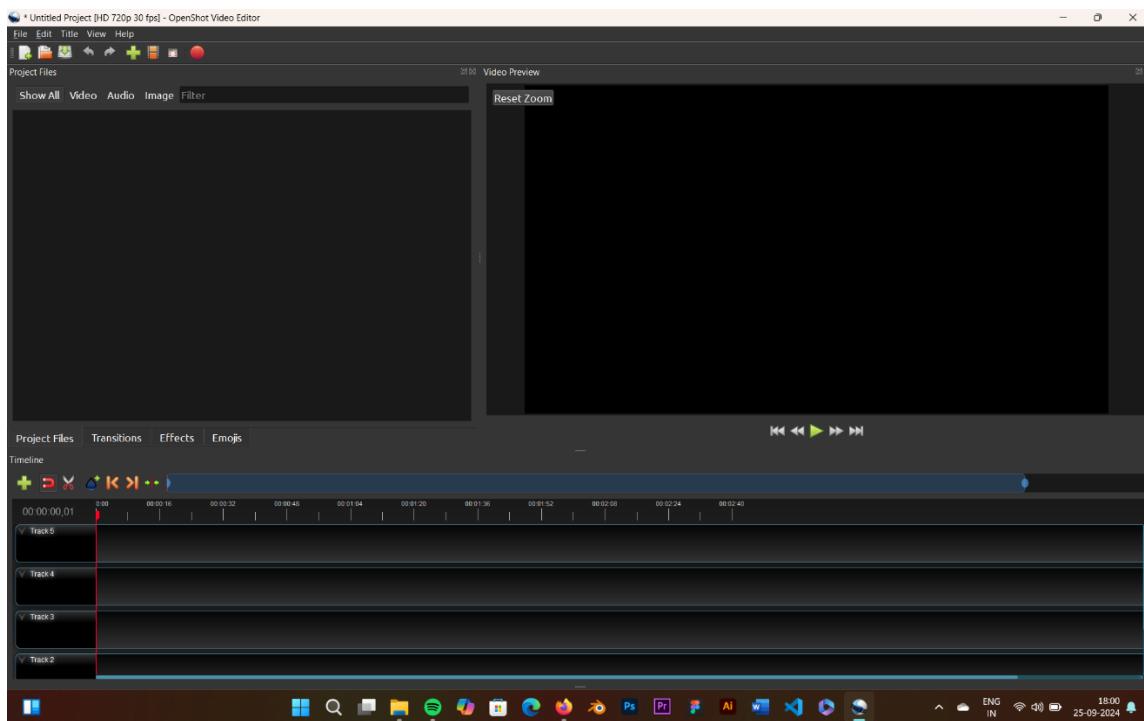

Working with Video Editing tool Open Shot to Compress and convert video file format to other popular formats.

Aim:

To compress and convert video file format to other popular formats using Open Shot software.

Procedure:

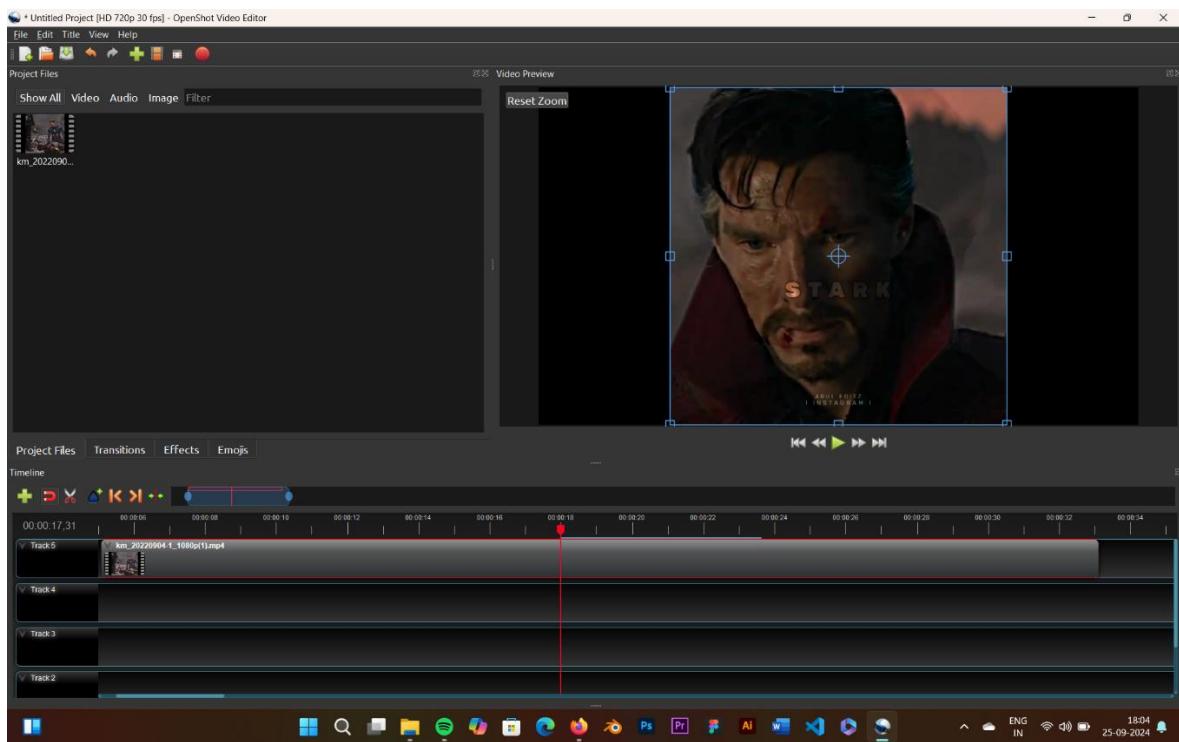

1. Go to the browser and paste the link <https://www.openshot.org/>
2. Install the software based on your OS.
3. Once done, the welcome screen looks like this.

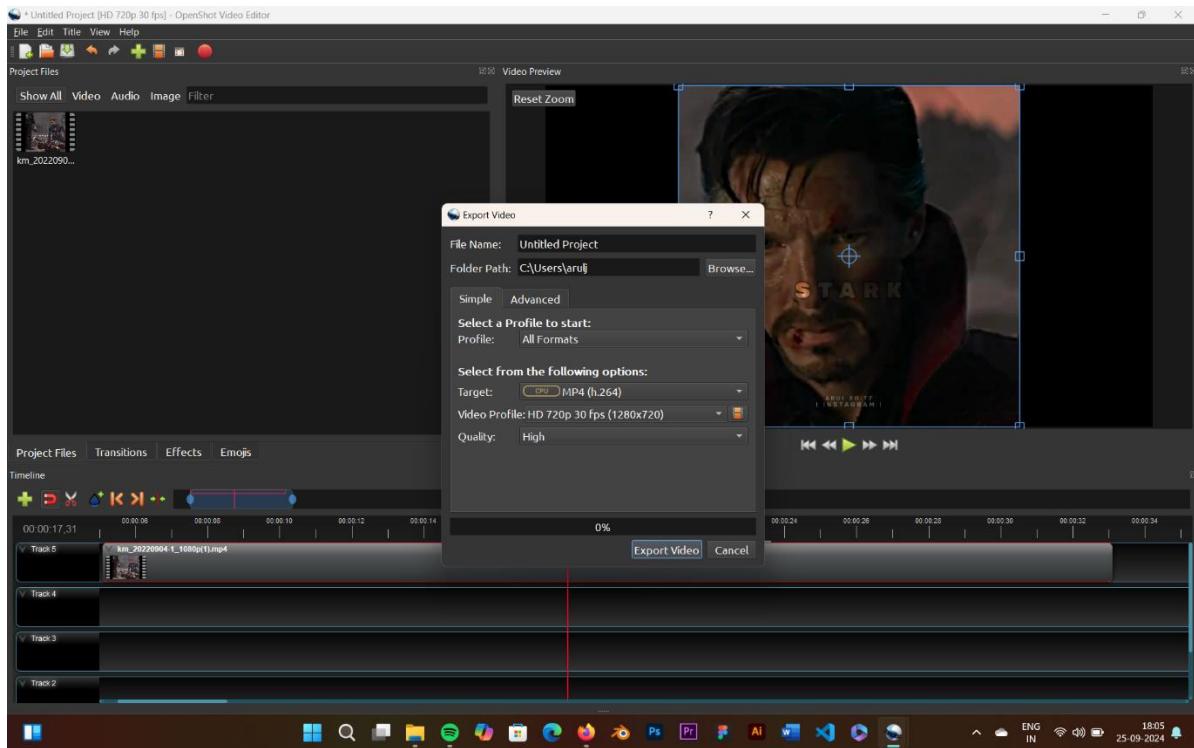

Working with Open shot Software:

Step 1: Click on the File menu in the navigation bar and then import required files for editing.

Step 2: Drag and drop the video to the track then the screen looks like this.

Step 3: Press **ctrl+E** then the screen looks like this.

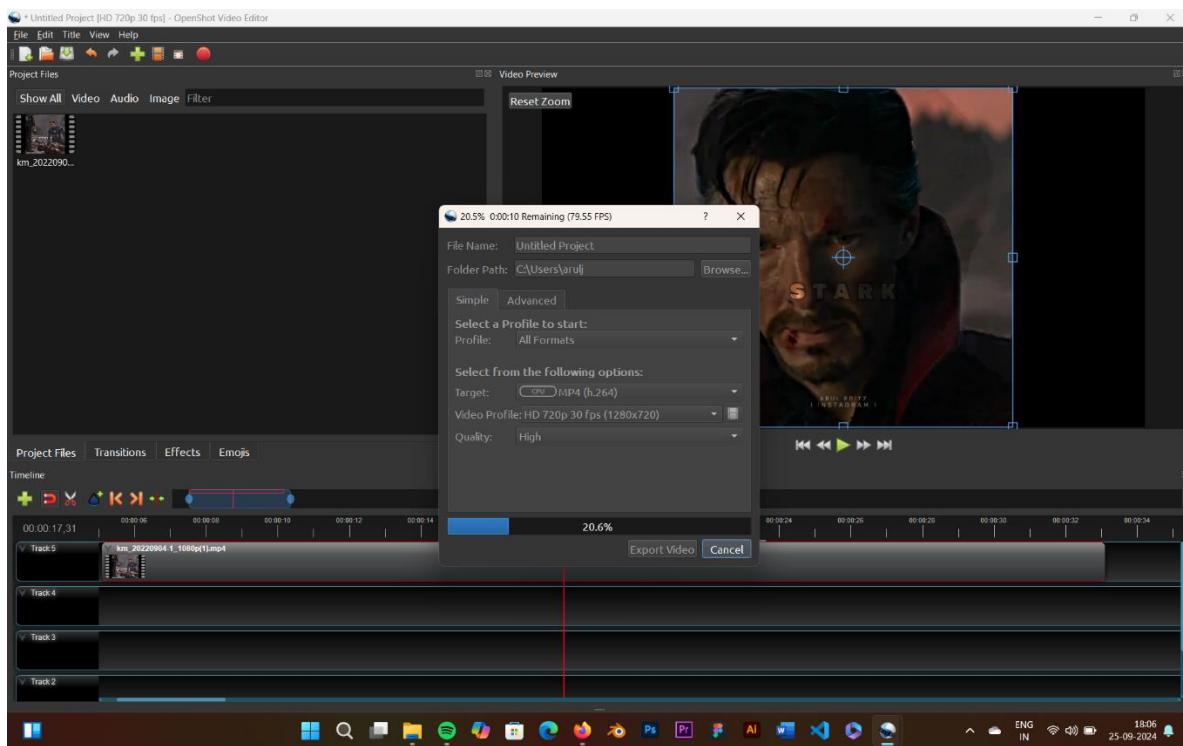

Step 4: Click on the target then choose any of the other format except mp4.

Step 5: Click on the Video Profile and choose your resolution.

Step 6: Click on the quality and then choose the quality of the video.

Step 7: Once finished all the settings, click on the export video button, then the screen looks like this.

Result:

Thus the expected output after converting the video to various formats using Open Shot software was achieved successfully.
